

COVID-19 Vaccine Tracking

BROUGHT TO YOU BY

What Makes A Great Vaccine Tracking Program?

Fully Web-browser Based

If employees or managers need to download new apps, create accounts, and so on, you'll create too much friction.

Options for Manager or Employee Access

Some orgs want each employee to do their own verification, others want managers to process each one. We allow for both options.

Designed for Vaccination Cards

We know most folks getting COVID-19 vaccinations are getting physical cards. We allow for uploading attachments OR seamlessly taking a pic from your cell phone camera.

Making The Data Useful

We log vaccine status realtime and present that to both our clinical team AND your dashboards. So we can make better exclusion recommendations and keep as many people working as possible.

We keep all vaccination images and attachments on file in case you need proof in the future.

Here's How We Process Vaccination Records

Some organizations are looking to have managers upload vaccine information for their team, others want employees to do them directly. We offer both!

Manager-led Upload

Managers have a good view into who is being vaccinated, they can hold an employee's hand through the vaccination process, and it's less likely that there are data entry errors.

Using your login method of choice, we can determine which location and staff each manager is responsible for, and then present them a list of their employees to choose from.

Employee Self-Upload

If you don't want your managers to be a bottle neck, or if you don't want them seeing your employee's PII for HIPAA reasons, we have a version for employees to enter their vaccine records themselves, too!

They simply log in and enter their vaccination info.

The screenshot shows a web form titled "COVID-19 Vaccination Verification for Managers". The form includes a dropdown menu to "Select an employee...", a dropdown for "Select the brand of vaccine...", and two date pickers for "First Vaccination" and "Second Vaccination". At the bottom, there is a dashed box for file upload with the text "Tap to Upload or Drag File Here" and a blue button labeled "COMPLETE THE VERIFICATION".

How We Use Vaccination Records

Make more accurate exclusions

If you use our wellness check program, we can immediately be making more accurate exclusion recommendations based on each employee's vaccination status.

If someone is exposed but they are vaccinated and within the window of immunity, we don't need to exclude them from work and YOU don't need to fill a shift or pay sick time!

See comprehensive reports

We can give you as much or as little access to this data as you need. We offer dashboards, full exports of vaccination logs, automated reports by location or region, whatever you need!

(We also can always produce one-offs when the health department comes knocking!)

Stay on top of vaccination stats + trends

Using your employee and location info, we can easily present you with trends and analytics about how much of your workforce is getting vaccinated.

Schedule a demo to learn more!

Whether you're an existing wellness checks customer, or you're just looking for vaccination tracking, we can make it work for you.
